

## TEKOO CHAMBER

### APPLICATION

- for installation in telecommunications networks
- MICRO CONNECTOR CHAMBERS
  - for installation in the lines of cable ducts
  - for protection of small junction boxes and for creating spare cables
- UNIVERSAL CHAMBER TYP
  - for storage and protection against mechanical damage of small couplings
  - for spare fiber optic cables
  - possibility to pull cables in the case of bends with a small radius
  - in underground installations as well as cable chambers, cellars

### BENEFITS light weight

- perfect tightness
- ease and speed of assembly
- can be installed in difficult places
- conditions ease of network
- expansion easy to keep clean
- durability of the product
- resistance to low temperatures
- recyclable

## TECHNICAL DESCRIPTION:

body, covers Z600/DN 614-PE with PE pipe rubber gasket DN 614 The tanks are made of polyethylene and are a great alternative to of their counterparts performed in a traditional way, e.g. from concrete. The cover for the tray may be equipped with a closure.

Front flat intakes in the corners allow introduction to standard diameter tube storage tanks  $\varnothing$  32mm,  $\varnothing$  40mm and  $\varnothing$  50mm. Pipe insertion can be performed with: rubber seals, welded half-couplings, welded connectors or by means of half-couplings with thread and nut. Assembly of seals rubber and threaded half-couplings and nut is possible on construction site.
